THE ORIGINAL
FROM MILAN
SINCE 1972

The LTS 750 PSA is a professional pneumatic heat press, equipped with a lower vacuum system to optimize many transfer applications.

The vacuum system helps to remove humidity from different fabrics. It guarantees that very thin fabrics like silk stay even on the lower plate without creating wrinkles which could damage the transfer. It is also a perfect system for the application of rhinestones like Swarovski stones, which thanks to the vacuum remain well positioned on fabrics without getting out of place. Ideal also for new kind of transfers which produce smells and fumes during the fixing process.

This heat press is equipped with an electronic board. On its display it is possible to visualize the requested time and temperature.

When the pressing time is over, the upper heating plate returns automatically and can be moved to the side with 2 handgrips positioned on the machine's head. The vacuum system can be activated or switched-off at any time, depending on the application needed.

TECHNICAL DATA

Model	LTS 750 PSA
Transfer area	[2 x] 40 x 50 cm
Press size	100 x 70 x 80 cm [b x h x d]
Cubic measure	100 x 80 cm [b x d]
Support size	100 x 80 cm [b x d]
Weight	190 kg

Time · Temperature

Digital timer	0-999 sec
Temperature	0-250 °C

Pneumatic funktion

Contact pressure	1,2-1,5 kg/cm ² · 2,5-10 bar
------------------	---

Connection · consumption

Heating output	2000 W
Power	380V · 50 Hz one-phase
Consumption	ca 2 kW

VACUUM SYSTEM

Model	AT 208
Voltage	380 V
Rotation	3400/min
Consumption	0,55 W
Frequency	50/60 Hz
Amperage	2,1 Amp
